

DIY CLOUD CONNECTIVITY VS. FASTLANE

-  Figure out which cloud service you want to use
-  Call a bunch of hosting companies to see which ones you can connect with
-  Negotiate & install connectivity to that hosting company's datacenter
-  Purchase rack space, power, ports & cross connects to the cloud provider you want
-  Commit to a year + of service
-  Hope you bought enough capacity so you don't have to repeat this process in order to finish your project

VS

FEATURES

Uninterrupted access to different public clouds

Use one service to flexibly switch between multiple providers

Quick and easy to deploy

Our team will help you optimise the configuration for different clouds and workflows.

Control over privacy and security

Skip the risk of the open internet and connect directly to the cloud, giving you full control over your data.

Ultra-low latency

Avoid congestion and enjoy low-latency and guaranteed throughput for fast, reliable transfer.

Scalable connectivity

Increase or decrease bandwidth as your project requires, and hit speeds as high as 100Gbit/s when needed.

Flexible pricing model

Minimise cloud egress charges and pay for what you use, so you can bid on projects freely.

WHO'S USING FASTLANE

"We use Sohonet because they're approachable and extremely knowledgeable about the post-production industry and its often unique requirements. They're also great at helping out with more unusual one-off requests extremely quickly."

Jonathan Brazier, Group Computer Systems Manager, The Mill
