

**Large capacity, high-performance file transfer.** FileRunner is a file transfer service, with no caps on usage, file size or volume, specifically optimised for transferring media assets at high-speed. Working directly in your browser, there are no downloads, plug-ins or costly server installs making it both quick to set up and easy to use.

### MEDIA OPTIMISED

FileRunner is designed to work with your existing workflow and tool sets. It uses multi-threaded parallel TCP uploads which maximises the throughput of your available bandwidth no matter what you're sending. Whether you're transferring directories of frame sequences or large file individual files we've got you covered.

### HASSLE-FREE

Getting your team set up on FileRunner is fast and simple. There's nothing to download or install on your machine to get started, and no expensive server installs to invest in: all you need is a web browser and a basic internet connection. It's simple to use, so most users won't require any training at all.

FileRunner is the only file transfer service on a dedicated private network. It leverages Sohonet FileStore as the underlying storage technology, making your file transfers fast, secure and reliable and eliminating the need for local server installs. Multi-threaded parallel accelerated file uploads allow for bandwidth optimization—better yet, there are no limitations or pricing governance on bandwidth utilized.

Sohonet FileRunner allows you to share unlimited data packages with collaboration partners who are already on the Sohonet Media Network (there are over 500 of them around the world). Each FileRunner account also has an included allotment of bandwidth for off-net recipients, so your transfer is seamless, regardless of where you send the files. Your packages are HTTPS-encrypted in transit, ensuring secure and reliable transfers.

### COST-EFFECTIVE

Our pricing models are simple and flexible. FileRunner can be deployed for as little as three months allowing you to make significant cost reductions by migrating some of your traffic from other services.

For more information on FileRunner head to <https://www.sohonet.com/filerunner/>

## FEATURES

### Unlimited file sizes

File transfer really is unlimited. Sharing heavy HDR videos or VR files is no problem at all.

### Unlimited usage

Send files to as many people/places as you need. No usage caps or storage limitations.

### No need to limit or shape bandwidth

FileRunner uses TCP so it's friendly to other traffic on your network, and you don't create bottlenecks.

### Easy to use

Simple web application with no tech experience required.

### Studio-grade security

Fully encrypted transfers, audit logs, reporting and 2FA options.

### Data traceability

Your data is hosted on a Sohonet-owned disc, so we know where your data is at all times.

### Automation tools

Auto-download application for Mac OS and a CLI tool for programmatic transfers.

### Store for 15 days

Enables individuals to access files when it suits them.

## WHO'S USING FILERUNNER?

Our clients love FileRunner's ease of use and the simplicity of the browser-based interface. Being encrypted and secure also ticks the boxes for our clients and us."

**John Mahtani, CCO at Cinelab London**
