

Sohonet FileStore is a fast, reliable and secure private storage solution for project parking, backup and archiving off-premises. FileStore is seamlessly integrated within the Sohonet Media Network and can be accessed on-demand, utilizing the full speed of your Sohonet connection. As with all of Sohonet’s products and services FileStore has been media optimised to effortlessly integrate within your production or post-production workflows.

Sohonet FileStore has been built on proven OpenStack technology, located within the security of the Sohonet Media Network. Built-in resiliency provides assurance that your data assets are secure both in transit and at rest. By default, data transferred into FileStore is replicated three times and continuous verification checks are performed to ensure file integrity. This allows the system to withstand hardware failure with minimum risk of data loss. Alternatively, FileStore DR offers two backup copies of each asset for a lower price.

ON-DEMAND ACCESS

FileStore is seamlessly integrated within our Media Network and can be accessed on-demand, utilizing the full speed of your Sohonet connection. With flexible contract length and low minimum commitments, no problem is too small. Plus, you can scale your storage capacity up and down as you need.

KEEP TRACK OF YOUR DATA

Hosted on our own disc, in our own racks in our own data centres, we never lose track of the location of your data: something we know can be critical for some projects. With integration options such as Storage Made Easy, we make searching your data really simple, so you can always find what you’re looking for.

FEATURES

Flexible

Storage bundles designed to meet your project needs and robust integration capabilities to third party services

High performance

High speed, low latency access with guaranteed throughput via the Sohonet Media Network.

Scaleable

Add extra storage capacity as needed, on demand, without affecting performance.

Rigorous security

Meets the standards of MPAA audit and security guidelines – with audit trail logging, encryption, and SOC-compliant data centres.

String disaster recovery

FileStore has built-in replication, with your choice of 2 or 3 copy redundancy.

Expert advise

FileStore is a fully managed solution with 24/7 support from M&E storage experts.

PROJECT PARKING

Store any or all of your data when projects are delayed or put on hold.

BACK-UP PROJECTS

Data and software can sync daily, and keeps backup copies to fall back on.

ARCHIVING

Keep your client data safe but quickly accessible to the right people.
