

REMOTE AUDIO REVIEW

Work with sound artists wherever they are and keep your production in tune

Whether it's working across split sound stages during production or conducting the final mixing review, sound teams need to be certain that everyone is hearing the same thing – wherever they are.

The shift to remote working and increased use of disparate teams has created a greater need for tools that allow real-time review of audio as it is mixed. But when you're bringing together teams from all around the world for live edits and audio-post completion, any streaming lag or loss of quality will degrade the experience.

SOHONET HELPS SOUND AND AUDIO TEAMS COLLABORATE REMOTELY

Studios and creatives face unique challenges at every stage of production. We developed our real-time review and approval tools to support high-quality, remote review of everything from dialogue edits to the final broadcast deliverable - giving sound artists the ability to discuss and edit in real time.

KEEPING BUSINESS BOOMING IN AUDIO POST-PRODUCTION

Clearview Flex provides artists with a sub-100 ms remote live streaming capability so that they can launch a session with up to 30 viewers for a live review of their creative work with rock solid audio accuracy. So, when you need to remotely review dailies, perform ADR or mix the final audio, ClearView Flex supports streaming in full 5.1 surround sound at bit-rates of up to 512kbps – all with end-to-end encryption.

REMOTE AUDIO REVIEW IN ACTION

The Mix Room has established a strong reputation for its work, boasting clients such as Mainframe Studios in Vancouver and SilverGate Media in New York, with shows destined for Nickelodeon and Netflix. The award-winning audio-post completion service started using ClearView Flex in 2020 to allow its sound artists to perform work in progress, reviews, and final presentations with clients remotely.

"We share files with clients, they send us back notes, we address those notes live with them over ClearView Flex and use real-time teleconferencing. It's as close as possible an experience to us all being together in a studio."

Jamie Mahaffey, Owner
- The Mix Room

MEET THE CLEARVIEW FAMILY

Solving your real-time remote audio review challenges

Sohonet's ClearView range gives you the freedom to meet the diverse collaboration challenges at every stage of your productions. Whether you're making decisions where quality is paramount, or you need the flexibility to review content from any device, anywhere, ClearView has you covered.

CLEARVIEW PIVOT: MULTI-POINT REAL-TIME REMOTE REVIEW

For remote content review sessions that just work, choose ClearView Pivot. It's a real-time, high-quality remote collaboration tool with added flexibility to pivot endpoints at the click of a button.

- > **4K HDR** with 12-bit colour depth and 4:4:4 chroma sampling
- > **5.1 surround sound** and 512kbps bit-rate
- > **Real-time streaming** with ultra-low latency
- > Delivered over the uncontented **Sohonet Media Network**
- > Connect **multiple endpoints** using a simple web interface

CLEARVIEW FLEX: REAL-TIME REMOTE REVIEW ANYWHERE

For truly flexible remote review, ClearView Flex enables real-time creative collaboration on editing, VFX and content production. Enjoy the best quality viewing experience from any location, on any device.

- > **Stream** via any network connection
- > **Access** on phone, tablet, Mac/PC or Apple TV
- > **10-bit colour** depth (4:2:2)
- > **5.1 surround sound**
- > **End-to-end encryption** and studio-grade security
- > **Work quickly** and effectively with that 'over-the-shoulder' review experience

CLEARVIEW GLOW: REAL-TIME REMOTE REVIEW IN HDR

ClearView Flex has expanded with Glow – offering new HDR streaming capabilities in real-time with ultra-low latency.

- > **Rendering the Rec. 2020 or P3 colour spaces** giving you much wider colour gamut to work with
- > **HDR/SDR content** of up to 2k DCI & 1080 resolution
- > **10-bit 4:2:2/4:4:4** colour capture and increased bit rates
- > **Multi-device support** delivering HDR to iPad, iPhone, Apple TV (coming soon)
- > **Built-in security** including encrypted video streaming, session burn-ins, and secure invite links
