

REMOTE VFX SHOT REVIEW

Bring the action to life from anywhere by sharing with colour- and frame-accurate footage in real-time

Since the shift to remote working, productions are using globally distributed VFX resources more than ever, creating a greater need for efficient tools for real-time review of VFX shots as they're developed. Artists share their work across the wider VFX team, senior production crew, execs and external clients – and when it comes to reviewing VFX shots, image quality is of paramount importance.

EMPOWERING VFX TEAMS TO COLLABORATE REMOTELY, SEAMLESSLY

When clients are on the move or a larger group of stakeholders want to take part in a VFX shot review, ClearView Flex provides an ideal way to join – wherever they are. As many as 30 team members can join, with the desktop sharing option providing an ideal way to view shots remotely. There's no need to render and export the content and sync data directories across locations prior to sharing – so everyone saves time, and your compute requirements are reduced across the project.

Because the presenter can show items that weren't originally on the agenda, sessions are flexible, efficient, and more productive.

With Flex Glow, colourists can stream HDR 2K DCI & 1080 resolution with 10-bit 4:2:2 / 4:4:4 capture, ultra-low latency, with up to 40 viewers in real-time.

ENSURE NONE OF THE FINE DETAIL IN YOUR VFX ARTISTS' WORK IS LOST IN TRANSLATION

And when your VFX shots are ready for final review in the Digital Intermediate, ClearView Pivot ensures your customer is able to see your creative magic at the highest bit depth and colour chroma possible in full High Dynamic Range in the same codec used in the final product (JPEG2000). There's minimal packet loss or jitter, even when reviewing across continents, so everyone can participate no matter where they are.

REMOTE VFX SHOT REVIEW IN ACTION

FuseFX is an award-winning VFX studio responsible for the likes of *Ozark*, *When They See Us*, *Mad Men*, *Annabelle*, and a host of other commercials, films and series. Their work has won awards including HPAs, Golden Globes, and Emmys. ClearView Flex was a crucial component in allowing FuseFX to successfully move to a remote workflow.

“Our biggest hurdle in going to a remote workflow was getting real-time, high-quality reviews. That’s why ClearView Flex is now a critical system for VFX reviews. It’s very easy to use, and you can send requests to join a session. It’s also very easy to include clients in those sessions.”

Jason Fotter, CTO – FuseFX

MEET THE CLEARVIEW FAMILY

Solving your real-time remote VFX shot review challenges

Sohonet's ClearView range gives you the freedom to meet the diverse collaboration challenges at every stage of your productions. Whether you're making decisions where quality is paramount, or you need the flexibility to review content from any device, anywhere, ClearView has you covered.

CLEARVIEW PIVOT: MULTI-POINT REAL-TIME REMOTE REVIEW

For remote content review sessions that just work, choose ClearView Pivot. It's a real-time, high-quality remote collaboration tool with added flexibility to pivot endpoints at the click of a button.

- > **4K HDR** with 12-bit colour depth and 4:4:4 chroma sampling
- > **5.1 surround sound** and 512kbps bit-rate
- > **Real-time streaming** with ultra-low latency
- > Delivered over the uncontented **Sohonet Media Network**
- > Connect **multiple endpoints** using a simple web interface

CLEARVIEW FLEX: REAL-TIME REMOTE REVIEW ANYWHERE

For truly flexible remote review, ClearView Flex enables real-time creative collaboration on editing, VFX and content production. Enjoy the best quality viewing experience from any location, on any device.

- > **Stream** via any network connection
- > **Access** on phone, tablet, Mac/PC or Apple TV
- > **10-bit colour** depth (4:2:2)
- > **5.1 surround sound**
- > **End-to-end encryption** and studio-grade security
- > **Work quickly** and effectively with that 'over-the-shoulder' review experience

CLEARVIEW GLOW: REAL-TIME REMOTE REVIEW IN HDR

ClearView Flex has expanded with Glow – offering new HDR streaming capabilities in real-time with ultra-low latency.

- > **Rendering the Rec. 2020 or P3 colour spaces** giving you much wider colour gamut to work with
- > **HDR/SDR content** of up to 2k DCI & 1080 resolution
- > **10-bit 4:2:2/4:4:4** colour capture and increased bit rates
- > **Multi-device support** delivering HDR to iPad, iPhone, Apple TV (coming soon)
- > **Built-in security** including encrypted video streaming, session burn-ins, and secure invite links
